Website vs. Facebook: Executive Summary

Los Amigos de Los Niños, Mulegé · Data through October 21, 2026 · Full report available separately

The short version: about **70 outside people** visited the website in the last four weeks. In the same four weeks, **9,756 people** saw our Facebook content. Comparing like for like, Facebook drew **939 page visits** to the website's ~70, about 13 to 1, and three out of four people seeing our posts had never heard of us before. Our storytelling time belongs on Facebook. The website's job is narrower, and it is doing that job.

9,756	939	~70	17%
People reached on Facebook (4 weeks)	Facebook page visits (4 weeks)	Website visits by outside people (4 weeks)	Website visitors who scroll far enough to see the graduate photos

Key points

- **The website is one page.** Average visit is 1.1 minutes. Old ladlnmulege.org links to /donate, /students and /volunteer were landing on an error page; redirects to the matching homepage sections were added October 21.
- **People stop a third of the way down.** Everyone sees the banner and the scholarship stats. Only 17% scroll far enough to reach the graduates' stories and photos. New photos added where they sit today would be seen by about 13 people a month.
- **Facebook is our front door.** It is the top known source of website traffic, and the "See our latest on Facebook" card is the most clicked thing on the homepage after the menu.
- **Facebook is growing fast.** Reach up 40%, page visits up 44%, interactions up 43% over the prior month. 77% of people seeing our posts do not follow us yet; Facebook is introducing us to new people every day. The website cannot do that.
- **The website does one thing well: Donate.** Donate buttons are the most clicked element on the site and five visitors reached the Zeffy checkout. Keep that path clean and fast.
- **Same photo, 100x the audience.** A typical post reached 1,000 to 5,800 people in a day. The website already republishes our Facebook feed automatically, so one upload lands in both places.

Recommendations

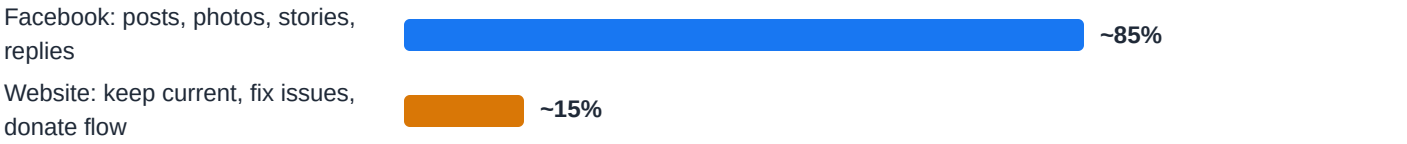

Do this (low effort, real payoff)

- **Post student and graduate photos to Facebook first.** The website picks them up for free.
- **Move a short "Meet our graduates" strip to just under the stats banner.** Takes the photos from 17% of visitors to 100%. About one hour of work, one time.
- **Fix the Facebook feed box on phones.** It errors on some devices and a third of visitors are on mobile.
- **Tag links in emails and newsletters** so we can see which outreach drives visits. 60% of traffic currently has no known source.
- **Keep Donate and Membership one click from the top.** Already true; protect it.

Hold off (effort will not be seen)

- **A large photo gallery on the website.** Fewer than 1 in 5 visitors scroll to where it would sit. The short strip near the top covers it.
- **More sections on the homepage.** People already stop a third of the way down.
- **Weekly website content updates.** With 2 to 3 visits a day, nobody is checking back for news. 1,100 Facebook followers are.
- **Search engine (SEO) investment.** Google sends about 2 visitors a week.

Suggested split of volunteer time

Check again in January

- Facebook people reached per month: 9,756 today, target 12,000+
- Website visitors who reach the graduates section: 17% today, target 60%+ after moving it up
- Website visits reaching Zeffy checkout: 5 per 7 weeks today, target 10+

Sources: Microsoft Clarity (website analytics, Sep 1 to Oct 21, 2026, bot traffic removed; also excludes 27 sessions from a Los Amigos administrator reviewing the site for changes) and Meta Business Suite Insights (Sep 23 to Oct 20, 2026). Facebook reach and website visits measure different things; page visits (939 vs. ~70) is the like-for-like comparison. The website launched on its new address in September, so longer trends will be available by the January board meeting.
