Where Our Audience Actually Is

Los Amigos de Los Niños, Mulegé · Website vs. Facebook · Data through October 21, 2026

The short version: In the last four weeks, about **70 real people visited the website**. In the same four weeks, **9,756 people saw our Facebook content** and **939 visited the Facebook page**. Comparing visits to visits, Facebook drew roughly **13 times more** page visits than the website, and its posts were shown to about 140 times as many people.

9,756	939	~70	1.1 min
People reached on Facebook (Sep 23 to Oct 20)	Facebook page visits (Sep 23 to Oct 20)	Website visits by outside people (same 4 weeks, est.)	Average time a visitor actually spends on the site

SIDE BY SIDE, SAME FOUR WEEKS

Bars are to scale. The website bars are thin because the numbers are small.

WHAT THIS REPORT ANSWERS

- How many people really use the website, and who they are
- What they look at, and where they stop reading
- Whether adding more student and graduate photos to the website would be seen
- Where our volunteer time gets the best return

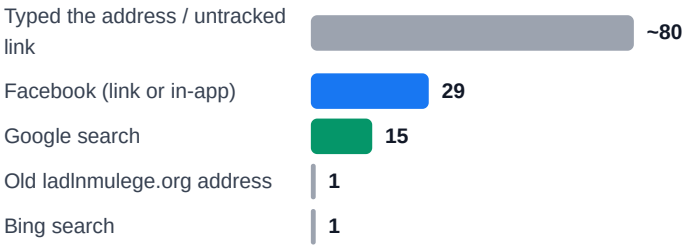

Sources: Microsoft Clarity (website analytics, Sep 1 to Oct 21, 2026, bot traffic removed); Meta Business Suite Insights for the Los Amigos Facebook page (Sep 23 to Oct 20, 2026). Website figures exclude 27 sessions from a Los Amigos administrator reviewing the site for changes.

1. The website, by the numbers

Seven weeks of data, September 1 through October 21. Automated bot traffic has been removed. 27 sessions from a Los Amigos administrator checking the site for changes have also been removed so these numbers reflect the outside public.

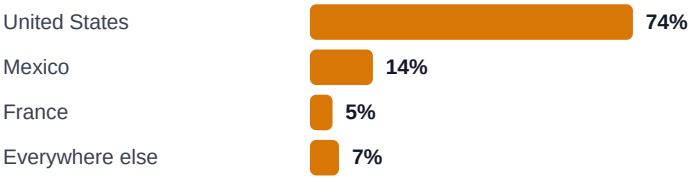

126	79	1.3	37%
Visits in 7 weeks (about 2.5 per day)	Different people	Pages viewed per visit	Of the homepage scrolled on average

WHERE VISITORS COME FROM

Of visitors we can trace to a source, Facebook sends twice as many as Google.

WHERE VISITORS ARE LOCATED

WHAT DEVICE THEY USE

WHICH PAGES GET SEEN

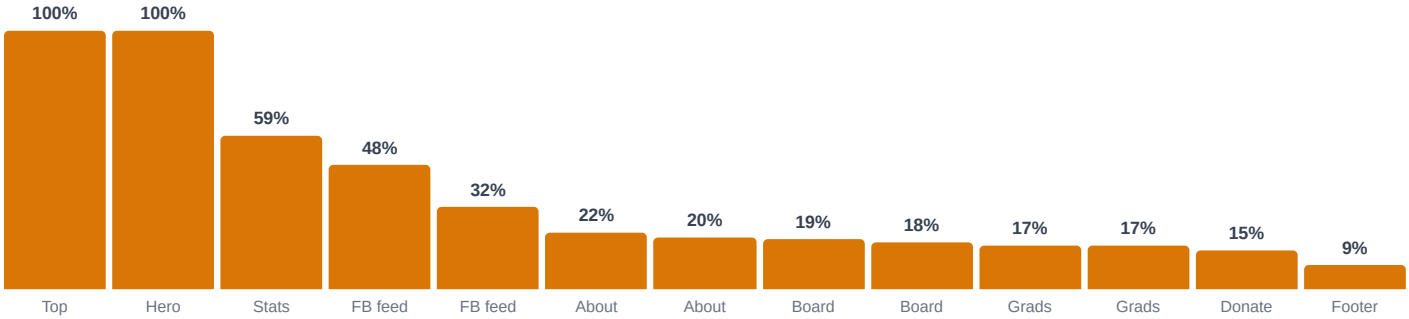

Translation: the website is a one-page site, so the homepage is the whole experience. The handful of visits recorded to /donate, /students, /volunteer and /news were people following old ladlnmulege.org links; those addresses did not exist on the new site and showed an error page until October 21, when redirects to the matching homepage sections were added. Some of the untracked visits are likely old links as well.

Source: Microsoft Clarity, Sep 1 to Oct 21, 2026. "Untracked link" means a visitor arrived by typing the address or from an email, text, or document link that carries no source tag.

2. How far down the homepage do people get?

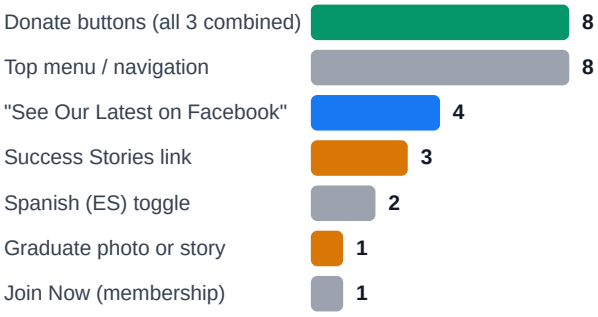

The homepage is long. It opens with the hero banner and the scholarship stats, then the live Facebook feed, then About Us, then the Board, then the graduates' stories and photos, then Donate and Membership. This chart shows what share of visitors scrolled far enough to see each part.

Fewer than 1 in 5 visitors ever reach the graduates' photos and stories. Four out of five leave before the About Us section. Everyone sees the hero banner and the stat tiles; most people stop right about where the Facebook feed begins.

WHAT PEOPLE CLICK ON THE HOMEPAGE

96 homepage views, 33 total clicks

THE GOOD NEWS

- **Donate is the most clicked thing on the site.** 8 of 33 clicks. 5 visitors made it all the way into the Zeffy checkout.
- **The Facebook card works.** It is the most clicked content block below the banner, and 7 visitors clicked out to an external link, mostly Facebook.
- **No frustration signals.** Zero rage clicks, zero quick back-outs. People leave because they are done, not because something broke.
- **Returning visitors are 42%.** A small, loyal group checks back.

3. Facebook, same period

Meta Business Suite, last 28 days (September 23 to October 20). Every number below is up 38% to 65% over the prior 28 days.

48.8K	9,756	939	610	1,100
Content views ▲ 39%	Different people reached ▲ 40%	Page visits ▲ 44%	Likes, comments, shares ▲ 43%	Followers (net +10 this month)

WHO SEES OUR FACEBOOK POSTS

Three out of four people who see our posts are new to us. Facebook is actively introducing Los Amigos to people who have never heard of it. The website cannot do that; someone has to already know the address or search for it.

WEBSITE VS. FACEBOOK: WHAT ONE HOUR OF VOLUNTEER TIME BUYS

If we spend an hour...	Who sees the result	Scale
Adding a photo gallery lower on the website homepage	The share of visitors who scroll that far today. About **13 people** per month.	~13
Adding more graduate photos to the homepage (current position)	The 17% who scroll that far. About **13 people** per month.	~13
Posting the same photos to Facebook	A typical post reached **1,000 to 5,800 people** in a day this month.	1,000+

The same photo of a graduate reaches roughly **100 times more people** on Facebook than on the website. And the website already pulls the Facebook feed in automatically, so a Facebook post shows up on the website for free.

Source: Meta Business Suite Insights, Los Amigos de Los Niños, Inc of Mulegé Facebook page, Sep 23 to Oct 20, 2026. Daily post reach figures from the Views chart in the same report. Note: Facebook "reach" counts people a post was shown to; website visits count people who chose to come. Page visits (939 vs. ~70) is the like-for-like comparison.

4. What the data says we should do

The website's job is narrow and it is doing it: be the credible, official landing spot when someone wants to donate, join, or verify we are real. Donate is the most clicked element on the site. Keep it clean, fast, and current. Put the storytelling effort where the audience is.

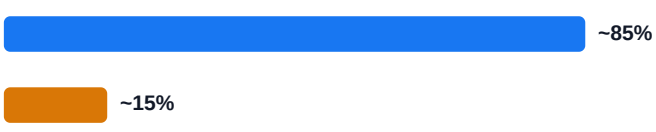

Worth doing (low effort, real payoff)

- **Post student and graduate photos to Facebook first.** The website's Facebook feed republishes them automatically. One upload, both places.
- **Move a short "Meet our graduates" strip up the homepage** to just under the stat tiles. That takes the photos from being seen by 17% of visitors to 100%. One-time change, about an hour of work.
- **Fix the Facebook feed box.** It throws an error on some phones and may show blank. A third of visitors are on phones.
- **Tag links we put in emails and newsletters** so we can see which outreach actually drives visits. Right now 60% of traffic has no known source.
- **Keep Donate and Membership one click from the top.** Already true; protect it.

Hold off (effort will not be seen)

- **Building out a large photo gallery on the website.** Fewer than 1 in 5 visitors scroll to where it would sit. The audience for it is on Facebook, and a short strip near the top covers the website side.
- **Adding more sections to the homepage.** People already stop a third of the way down. Longer makes it worse.
- **Weekly website content updates.** With 2 to 3 visits a day, nobody is checking back for news. Facebook has 1,100 followers who are.
- **Investing in search (SEO).** Google sends 2 visitors a week. Fine to leave as is.

SUGGESTED TIME SPLIT FOR VOLUNTEER EFFORT

HOW WE WILL KNOW IT IS WORKING (CHECK AGAIN IN JANUARY)

Measure	Today	Target
Facebook people reached per month	**9,756**	**12,000+**
Facebook followers	**1,100**	**1,200**
Website visitors who reach the graduates section	**17%**	**60%+ (after moving it up)**
Website visits that reach Zeffy checkout	**5 in 7 weeks**	**10+ per 7 weeks**
Website traffic with a known source	**40%**	**70%+**

Prepared October 21, 2026 from Microsoft Clarity and Meta Business Suite data. Figures are for the periods noted on each page; the website launched on the new address in September, so longer trends will be available by the January board meeting.
